

**Fun with Plants: Seeds Are Scattered in Many Ways**

Seeds move from place to place in many ways.

To see how seeds travel collect all the seeds you can find. Test them to see how they might travel to a new home. Float them on water, blow them through the air, or roll them on the ground.

1. Make a list of other ways you can think of that seeds travel.
2. Find the name of a plant with that type of seed.
3. And draw a picture of seeds that travel that way.

| <u>Way to travel</u> | <u>Name of plant</u> | <u>Drawing</u>   |
|----------------------|----------------------|--|
| ex. Floats on air    | Dandelion            |  |
| 1. _____             | _____                |  |
| 2. _____             | _____                |  |
| 3. _____             | _____                |  |
| 4. _____             | _____                |  |
| 5. _____             | _____                |  |
| 6. _____             | _____                |  |

Why do you think seeds have ways to travel? \_\_\_\_\_
