Benches & Bench Construction:

Important Considerations:
- Bench Height
- Bench Width
- Air Flow
- Strength
- Compatibility
- Adaptability to New Technology
- Support Requirement

Benching Systems
- Ground Beds
- Concrete/Gravel Floors
- Rolling Benches
- Ebb and Flow Benches
- Flood Floors
- Troughs
- Removable Benches

Bench Arrangement
- Rows
- Peninsula
- Other

Calculating Use Efficiency

Total Area Under Cover:
Length x Width = Covered Area

Bench Area:
Length x Width (for each bench) = Bench Area

(Bench Area / Covered Area) x 100 = % Use Efficiency
